

# Radford Heath

## CAD/CAM Restorations

- We are now able to provide you with additional choices for your all-ceramic copings, multiple-unit bridge frameworks, splinted teeth, inlays, onlays and crowns.
- Combining aesthetics with strength these types of restorations have all the qualities of traditional frame design without the metal content.
- As recommended by leading material providers: VITA®, Ivoclar® and 3M™ ESPE™.

Blending cutting edge technology.....  
.....with traditional techniques  
to produce strong, beautiful results.

**Radford Heath**  
*Dental Ceramics*

**CEREC inlab®**  
Strong, beautiful, choices.

Decide for yourself. CEREC inLab sets new standards in terms of material diversity.

You can choose from a total of eight different materials: three tried-and-tested oxide ceramics (VITA In-Ceram ZIRCONIA, ALUMINA, SPINELL BLANKS); four finely structured feldspathic ceramics (VITABLOCS MARK II, ESTHETIC LINE, TriLuxe, IVOCLAR VIVADENT ProCAD BLOCKS); plus zirconium oxide (VITA In-Ceram YZ CUBES). With these eight materials at your disposal you can respond even more flexibly to customer requirements in terms of clinical indications, aesthetics, production times and durability.
